Site Log

The Admin > Advanced Settings >  Site Log page enables users to view twelve statistical reports on site activity. By default the reports display activities for last seven days including today or they can be set to show data for any preferred date range. Any user who has been granted access to view this module can view reports. Super Users can enable the Site Log and restrict the number of days log history is kept for.

Note: When the Site Log is enabled, the Host > Schedule page will display the "Purge Site Log" tasks which deletes all Site Log data for days outside of the site log history. E.g. this task will delete records older than 30 days when Site Log history is set to 30 days.

Enabling the Site Log

The Site Log is disabled by default and must be enabled and configured by a Super User before it can be used to generate reports.

Reports

Affiliate Referrals

The Affiliate Referrals report tracks referrals from affiliates that include an affiliate ID = number in the URL to the site. This report displays the Affiliate Id number; the number of requests associated with this affiliate; and the date and time of the last referral.

Detailed Site Log

The Detailed Site Log report displays a detailed log of all site activity for all site users, including Administrators and Super Users. This report displays the date and time of each visit; the username of authenticated users; the previous website that the user visited prior to this session; the web browser; the host address of the user; and the name of the page they visited.
